

Problem Solving Wrksht

Answer Key

1) 194 ft

2) 86°

4) 18

5) 894 ft

Test Review Answers

1. $a = 8.779$ 4. $51^{\circ}19'$ $B = 43^{\circ}30'$ $C = 54^{\circ}20'$ 5. 87°

2. 16.11cm and 28.95cm

3. 47 ft.

Law of cosines/sines review

1. Given $b = 6.1$, $c = 7.2$, and $A = 82^\circ 10'$. Solve the triangle.

Find sides to the nearest thousandths and angles to the nearest minute.

$$a^2 = 7.2^2 + 6.1^2 - 2(7.2)(6.1) \cos 82^\circ 10'$$

$$a = 8.779$$

$$\frac{\sin B}{6.1} = \frac{\sin 82^\circ 10'}{8.779}$$

$$\angle B = 43^\circ 30'$$

$$\angle C = 54^\circ 20'$$

2. A parallelogram with sides of 15 and 18 cm contains an angle of 57.6° . Find the length of both diagonals to the nearest 100^{th} .

$$x^2 = 15^2 + 18^2 - 2(15)(18) \cos 57.6$$

$$x = 16.11$$

$$x^2 = 15^2 + 18^2 - 2(15)(18) \cos 122.4$$

$$x = 28.95$$

3. Ted and Joe are hiking in the Catskill Mountains. As they hike, they are surprised to see a fire station high above the trees. Ted takes a reading and finds the angle of elevation to the top of the fire station to be $11^{\circ}20'$. They continue hiking for another 200 yards and measure the angle of elevation to be 55° . Find the height of the tower to the nearest foot.

$$\frac{\sin 43^{\circ}40'}{200} = \frac{\sin 11^{\circ}20'}{y}$$

$$y = 56.923 \dots$$

$$\sin 55 = \frac{x}{56.923 \dots}$$

$$x = 46.628$$

$$\boxed{47 \text{ feet}}$$

4. Sue and Nicole want to build a triangular lean-to in their backyard to store firewood for their fireplace. They would like to use 12 foot sheets of plywood for the sides and a 13 foot piece of wood for the floor which will be raised 1 foot off the ground. Since the floor is raised, only 10.4 feet of each side will be forming the lean-to. What must the base angles measure to the nearest minute?

$$\cos X = \frac{10.4^2 + 13^2 - 10.4^2}{2(10.4)(13)}$$

$$\cos X = \frac{169}{270.4}$$

$$\boxed{X = 51^{\circ}19'}$$

5. The members of the Horticulture Club are designing a wildflower garden. They want to make it in the shape of a triangle whose sides have lengths of 12, 14 and 18 feet. What is the measure of the largest angle in the triangle to the nearest degree?
