

Word Problems using Exponential Growth and Decay

Jan 30-6:20 PM

HW 9-7

Questions 1 and 2: See next slide for solutions

3. 2

4. Reflection over the x-axis, Right 3, Down 2

5. Left 3, Up 10

6. $y = (27.2025)(1.1509)^x$

6. $x^{\frac{7}{4}}$

7. $11^{\frac{3}{7}}$

8. $27x^6$

9. $a^{\frac{1}{4}}$

10. 3

Feb 1-4:51 PM

Name _____

Alg 2 HW9-7

1. Graph $y = 3^x$

Show a table of values.

x	y
-2	1/9
-1	1/3
0	1
1	3
2	9

2. Graph $y = 3^{-x}$

Show a table of values.

x	y
-2	9
-1	3
0	1
1	1/3
2	1/9

Exponential growth or decay? (Circle One)Domain $\{x | x \in \mathbb{R}\}$ Range $\{y | y > 0\}$ Exponential growth or decay? (Circle One)Domain $\{x | x \in \mathbb{R}\}$ Range $\{y | y > 0\}$

Nov 24-11:13 AM

3. Which statement is always true about the graph of $f(x) = \left(\frac{1}{8}\right)^x$?

1. The graph is always increasing.

2. The graph is always decreasing.

3. The graph passes through the point (1, 0).

4. The graph has an asymptote, $x = 0$.

State the transformations of the following functions.

4. $y = -3^{x-3} - 2$

① x-axis
② right 3③ down 2

5. $y = 2^{x+3} + 10$

① left 3② up 10

Jan 30-3:02 PM

6. A population of single celled-organisms was grown in a petri dish over a period of 16 hours. The number of organisms at a given time is recorded in the table below. Determine the exponential regression equation model, rounding all values to the nearest ten-thousandth.

Time, hrs (x)	0	2	4	6	8	10	12	16
Number of Organisms (y)	25	36	52	68	85	104	142	260

$$y = (27.2025)(1.1509)^x$$

Simplify.

$$6. \quad x^{\frac{1}{4}} \cdot x^{\frac{3}{2}} = x^{\frac{1}{4}} \cdot x^{\frac{6}{4}} = x^{\frac{7}{4}}$$

$$7. \quad \frac{11^{\frac{5}{2}}}{11^{\frac{2}{2}}} = 11^{5-2} = 11^3$$

$$8. \quad (9x^4)^{\frac{3}{2}} = 9^{\frac{3}{2}} x^{\frac{12}{2}} = (\sqrt{9})^3 \cdot x^6 = 27x^6$$

$$9. \quad \frac{a^{\frac{1}{3}} \cdot \sqrt[5]{a}}{a^{\frac{1}{4}}} = \frac{a^{\frac{1}{3}} \cdot a^{\frac{1}{5}}}{a^{\frac{1}{4}}} = \frac{a^{\frac{4}{12}} \cdot a^{\frac{2}{12}}}{a^{\frac{3}{12}}} = \frac{a^{\frac{6}{12}}}{a^{\frac{3}{12}}} = a^{\frac{3}{12}} = a^{\frac{1}{4}}$$

Feb 1-4:34 PM

10. The value(s) of x that satisfy $\sqrt{x^2 - 4x - 5} = 2x - 10$

1. {5}

2. {7}

3. {5,7}

4. {3,5,7}

Check x=7

$$\sqrt{49-28-5} = 14-10$$

$$\sqrt{16} = 4$$

$$4 = 4$$

$$x=5$$

$$\sqrt{25-20-5} = 10-10$$

$$\sqrt{0} = 0$$

$$0 \neq 0$$

$$x^2 - 4x - 5 = (2x - 10)^2$$

$$x^2 - 4x - 5 = 4x^2 - 40x + 100$$

$$-x^2 + 4x + 5 = -x^2 + 4x + 5$$

$$\frac{3x^2 - 36x + 105}{3} = 0$$

$$x^2 - 12x + 35 = 0$$

$$(x-7)(x-5) = 0$$

$$x-7=0 \quad x-5=0$$

$$x=7 \quad x=5$$

Feb 1-4:34 PM

Warm-up

Unit 9 Day 8

Graph $y = 400(.85)^{2x} - 6$

Find the average rate of change for the interval of $1 \leq x \leq 4$

Feb 1-1:50 PM

Word Problems Involving Exponential Functions:

$$A(t) = a(1 \pm r)^t \quad \longleftrightarrow \quad \text{think: end} = \text{start} (1 \pm r)^{\text{time}}$$

where:

 $A(t) \rightarrow$ ending value $r \rightarrow$ rate of growth or decay (decimal form) $a \rightarrow$ starting value $t \rightarrow$ time $(1 \pm r) \rightarrow$ growth or decay factor

For 1 & 2, given the equation, determine

- increasing or decreasing
- the initial amount
- the rate of change
- the growth/decay factor
- Find $P(3)$ to the nearest hundredth

1. $P(t) = 6000(.8)^t$

(a) decreasing (base < 1)

(b) 6000

(c) $1 - .8 = .20$ loss of 20%

(d) .8

$$(e) P(3) = 6000(.8)^3$$

$$= \underline{3072}$$

2. $P(t) = 10,000(1.25)^t$

(a) increasing (base > 1)

(b) 10,000

(c) .25 gain of 25%

(d) 1.25

$$(e) P(3) = 10000(1.25)^3$$

$$= \underline{19531.25}$$

Jan 30-6:19 PM

3. A certain car depreciates about 15% each year.
- Write a function to model the depreciation in value for a car valued at \$25,000.
 - Suppose the car was worth \$25,000 in 2013. How much will the car be worth in 2018?

$$A(t) = a(1-r)^t$$

$$(a) C(t) = 25,000(1-.15)^t$$

$$C(t) : 25,000(.85)^t$$

$$(b) t : 5$$

$$C(5) : 25,000(.85)^5 : \$11,092.63$$

4. Weeds are growing in Tony's front lawn at a rate of 5% per week. The lawn is 7500 square feet. If there are 40 square feet covered with weeds now, how many square feet, to the nearest integer, of the lawn will be covered with weeds after 7 weeks? **Hint: Write the function first and then evaluate for 7 weeks.**

$$W(t) : 40(1+.05)^t$$

$$W(t) : 40(1.05)^t$$

$$W(7) : 40(1.05)^7 : 56 \text{ square ft}$$

Jan 30-6:19 PM

5. In New York State, the minimum wage has grown exponentially. In 1966, the minimum wage was \$1.25 an hour and in 2015, it was \$8.75.

Algebraically determine the rate of growth to the nearest percent.

$$A(t) = a(1+r)^t \quad r?$$

$$\frac{8.75}{1.25} = \frac{1.25(1+r)^{49}}{1.25}$$

$$7^{\frac{1}{49}} = (1+r)^{49 \cdot \frac{1}{49}}$$

$$1+r = 1.040511534$$

$$r = .0405115342$$

$$\textcircled{4\%}$$
