

Review for Quiz

Answers

Sep 15-10:39 AM

1. Given the points A(-4, 5) and B(1, -5) find the midpoint.

$$\text{midpt} = \left(\frac{-4+1}{2}, \frac{5-5}{2} \right) = \left(-\frac{3}{2}, 0 \right)$$

2. Write the equation of a circle with a diameter that passes through the points (4, 5) and (-2, 8).

$$\begin{aligned} \text{midpoint} &= (1, 13/2) & (x-1)^2 + (y-13/2)^2 &= r^2 \\ (x-1)^2 + (y-13/2)^2 &= 45/4 & (4-1)^2 + (5-13/2)^2 &= r^2 \\ & & 9 + 9/4 &= r^2 \\ & & r^2 &= 45/4 \end{aligned}$$

Sep 15-10:08 AM

3. Write the equation of a circle with center (-5, 3) and radius $3\sqrt{2}$.

$$(x+5)^2 + (y-3)^2 = 18$$

4. Write the equation of a line in slope-intercept and standard form that passes through the point (-3, 5) and is parallel to the line $2x - 3y - 7 = 0$.

$$\begin{aligned} m &= \frac{2}{3} & 3y &= 2x - 7 \\ y - 5 &= \frac{2}{3}(x + 3) & y &= \frac{2}{3}x - 7 \\ 3y - 15 &= 2x + 6 & \text{Standard: } 2x - 3y + 21 &= 0 \\ & & \text{slope-int: } y &= \frac{2}{3}x + 7 \end{aligned}$$

Sep 15-10:08 AM

5. Write the equation of a line in slope-intercept and point-slope form that passes through the points (3, 1) and (-5, -8).

$$\begin{aligned} m &= \frac{-8-1}{-5-3} = \frac{9}{8} & y - 1 &= \frac{9}{8}(x - 3) \text{ or } y + 8 = \frac{9}{8}(x + 5) \\ 8y - 8 &= 9x - 27 & \rightarrow y &= \frac{9}{8}x - \frac{19}{8} \end{aligned}$$

6. Write an equation of a line perpendicular to the line $2y = 4x - 10$ that passes through the point (-4, 5).

$$\begin{aligned} \text{noformasked. Go easy} & \hookrightarrow y = 2x - 5 \\ y - 5 &= -\frac{1}{2}(x + 4) & \perp m &= -\frac{1}{2} \end{aligned}$$

Sep 15-10:09 AM

7. State the domain and range of the function, $g: \{(-3, 1), (2, -5), (-1, -1), (3, 1)\}$

$$\text{Domain: } \{-3, 2, -1, 3\} \quad \text{Range: } \{1, -5, -1\}$$

How do you determine from a given set of points whether or not the relation is a function?
If each x-value maps to exactly one y-value it's a function.

- 8 - 10: Sketch the function. Find the domain and range. If there are domain restrictions, show algebraically.

$$8. \quad y = -x^2 + 2x$$

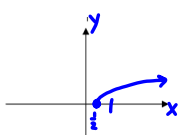

$$\begin{aligned} \text{Domain: } & (-\infty, \infty) \\ \text{Range: } & (-\infty, 1] \end{aligned}$$

Sketch:

9. $y = \sqrt{2x-1}$ Sketch: 

Domain: $[\frac{1}{2}, \infty)$ $2x-1 \geq 0$
 $x \geq \frac{1}{2}$

Range: $[0, \infty)$

10. $y = \frac{4}{3x-1}$ Sketch: 

Domain: $(-\infty, \frac{1}{3}) \cup (\frac{1}{3}, \infty)$ $3x-1=0$
 $x = \frac{1}{3}$

Range: $(-\infty, 0) \cup (0, \infty)$

Sep 15-10:09 AM

11. Given: $f(x) = x^2 - 3x + 4$, find

a. $f(2) = 4 - 6 + 4 = 2$

b. $f(-2) = 4 + 6 + 4 = 14$

c. $f(a-1) =$
 $(a-1)^2 - 3(a-1) + 4$
 $= a^2 - 2a + 1 - 3a + 3 + 4$
 $= a^2 - 5a + 8$
